Hiring Manager / Software Engineering Team

CENTRAL BANK OF KENYA

P.O Box 60000-00200 / Nairobi, Kenya

RE: Full-Stack / Software Engineer Application

Dear Hiring Committee,

I am writing to express my strong interest in the Software Engineer position at Central Bank of Kenya. With a robust foundation in full-stack web and mobile development (MERN, React Native, Expo), hands-on backend engineering specialization from ALX Africa, and practical experience in edge networking and local AI systems, I bring a versatile, architecture-focused approach to building scalable digital solutions.

Over the past several years, I have successfully operated as a freelance developer, managing the entire software lifecycle from system design to client delivery. Recently, I have architected platforms such as **Panga Crew**—a hyperlocal event logistics app built on the MERN stack—and **Rafiki Yangu**, a React Native application leveraging Supabase and AI models. Beyond standard application engineering, my technical curiosity extends into systems and edge infrastructure, where I have designed WireGuard VPN overlays with Zephyr RTOS (*RoamFi*) and local, cloud-independent AI assistants running Small Language Models.

What drives my work is the balance between pristine user experience and optimized backend performance. Whether tuning MongoDB queries for lower latency, configuring Linux network namespaces, or prototyping cross-platform mobile interfaces, I focus on delivering reliable, maintainable code aligned with real business goals.

I would welcome the opportunity to discuss how my technical skill set and independent engineering mindset can contribute to Central Bank of Kenya's engineering goals. Thank you for your time and consideration.

Sincerely,

Stosh Ochieng

Full-Stack & Systems Engineer
